If you are following along with the course, please download the ova file at this location:

https://s3.amazonaws.com/vmimportcma/ubuntu_16_04.ova

Download the file locally and then you will have to upload the file to an S3 Bucket that you create. Please remember that the S3 Bucket is referenced in the json files used in the course so you will have to edit those files to include the name of your S3 Bucket.

The second option is to keep the json files as they are, and use my S3 Bucket which already has the ova file. You won't have to change anything. Just follow along with the steps in the course lessons.
